

Transparent Animals

Here are the most interesting transparent animals, from icefish to jellyfish to frogs to butterflies! Nature sure is very interesting!

Glass Frogs belong to the amphibian family Centrolenidae

deep-water fish called the Barreleye (*Macropinna microstoma*) has a transparent head and tubular eyes.

Glasswing Butterfly (*Greta oto*) is a brush-footed butterfly where its wings are transparent.

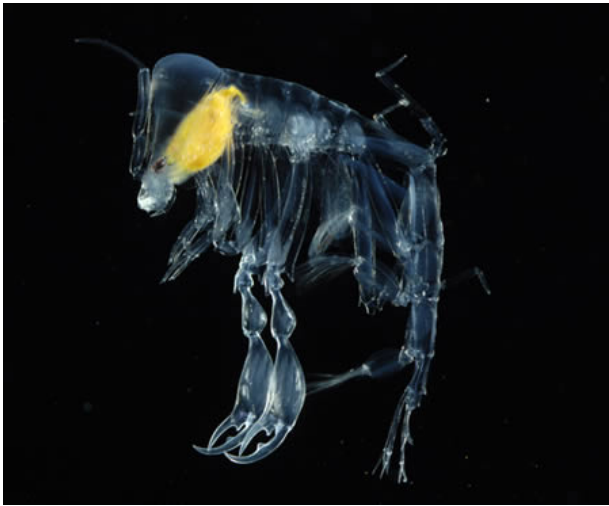

Glass Squid (*Teuthowenia pellucida*) has light organs on its eyes

Zebrafish was created in 2008 by scientists so they can study disease processes

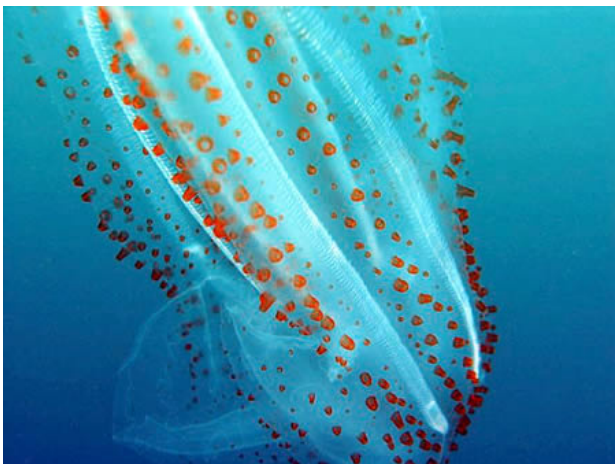

Crocodile icefish (Channichthyidae) blood is transparent because they have no hemoglobin

Phronima shows everything it has, inside and out, in an attempt to better camouflage themselves or disappear.

Larval shrimp piggybacks on an equally see-through jellyfish.

Salps are transparent, barrel-shaped animals that can range from one to 10cm in length.

Many jellies are so transparent that they are almost impossible to see
